Socket tester ST007 – USA (Type B)
Professional device for testing the socket and the GFCI

ST007 makes the Electrical Testing easy for the End User.
Our innovative technology socket testers bring you most accurate results of critical faults in your wiring system and eliminates the need of the highly-cost Earth Ground Testers.

Details
- The ST007 will test the socket wiring and polarity, and will indicate exactly each of the faults in the wiring system.
- The ST007 will check the operation of the GFCI, and whether the GFCI is damaged.
- Just Plug The socket tester into the socket and get accurate results in seconds without the need of highly cost Earth Ground Testers.
- Our Customers include End users, Electricians, technicians, engineers, manufacturers, and computer network professionals; people who give extra attention and care for safety.

Technical Details

Operating voltage & Frequency: 110-120VAC 60Hz

Poles: 2P+E

Power supply: From mains

Power consumption: < 0.25W

Overvoltage category: Cat II / 300 V

Temperature Range: -15°C to 45°C

IP: IP20

Material: Base of device: PC Polycarbonate
            Pins and socket contacts: brass

Pollution degree: 2

Certification: Complies with UL and CSA.

Warranty: 3 years Manufacturer Warranty.

Safety: Do not use the ST007 Prior to reading carefully all the user manual.

Country: North and Central America, Japan.

ITEMS:

16A	120VAC	60Hz	0.25W	-15°C to 45°C	IP20	3 years Warranty		type B
